AB Title compds. [I; wherein A, B, D, and E independently = CH or N; n = 0, 1, or 2; R1 = H, OH, NO2, halo, or alkyl, etc.; R2 = H, (un)substituted alkyl, or aryl, etc.; R3 = (un)substituted alkyl, cycloalkyl, or aryl, etc.], and their pharmaceutically acceptable salts thereof, were prepared as modulators of estrogen related receptors, useful in the treatment of, e.g., metabolic disorders. Thus, the invention compound II was prepared by heterocyclization of 2-amino-4-methoxybenzoic acid with benzoyl chloride followed by condensation with methylamine.

AB Provided herein are macrocyclic serine protease inhibitor compds., for example, of formula I, pharmaceutical compns. comprising the compds., and processes of preparation thereof. Also provided are methods of their use for the treatment of an HCV infection in a host in need thereof. Compds. of formula I wherein R5 is OH, NH2 and derivs., NHSO2H and derivs., NHSO2NH2 and derivs.; R6 is H, C1-6 alkyl, C2-6 alkenyl, C2-6 alkynyl, etc.; L is a bond, C1-6 alkylene, C3-7 cycloalkylene, C2-6 alkenylene, etc.; Q1 is O, NH and derivs., (un)substituted methylene, etc.; Q2 is C3-9 alkylene, C3-9 alkenylene, C3-9 alkynylene, etc.; and single enantiomers, racemic mixts., mixts. of diastereoisomers, pharmaceutically acceptable salts, solvates and prodrugs thereof, are claimed. Example compound II was prepared by a multistep procedure (procedure given). All the invention compds. were evaluated for their serine protease inhibitory activity. From the assay, it was determined that compound II exhibited IC50 and EC50 values of less than

1 μM and a CC₅₀ value greater than 75 μM .

AB The authors disclose the use of antagonists of Toll-like receptors, their coreceptors, or a combination thereof for the treatment and control of ocular allergies. Addnl., the therapy can include an anti-allergic medicament comprised of an antihistamine, a mast-cell stabilizer, a leukotriene inhibitor, an immunomodulator, or an anti-IgE agent. In one example, the Toll-like receptor antagonist is an inhibitory oligonucleotide.

AB A new water-soluble radiolabeled prodrug 2-(2-phosphoryloxyphenyl)-6-
 125I-4(3H)-quinazolinone was designed and synthesized, which can be
 converted to a water-insol. radiolabeled drug by the action of alkaline
 phosphatase for antibody-directed enzyme prodrug therapy (ADEPT). When
 the pro-drug react with special enzyme on the surface of tumor, the
 prodrug changes to therapeutic drug and then pervades into tumor tissue
 and the radioactive 125I will use it radiancy to kill the tumor cell.
 This compound, known as the ELF (enzyme-labeled-fluorescence) phosphatase
 substrate, produces a precipitate that fluoresces at about 500- 600 nm (bright
 yellow-green). The radiolabeled precipitate will be trapped within the tumor
 mass and should produce protracted irradiation of tumor cells. The compound
 can be hydrolyzed to water-insol. 2-(2-hydroxyphenyl)-
 6-iodo-4(3H)-quinazolinone when incubated with alkaline phosphatase.
 Bis(tributyl)stannane used to activate organic compound during labeling was
 good.

LANGUAGE: AB Glycogen synthase kinase 3β (GSK-3β) is one of the important
 targets in the treatment of type II diabetes and Alzheimer's disease.
 Currently this target is in pursuit for type II diabetes and a few
 GSK-3β inhibitors have been now advanced to Phases I and II of clin.

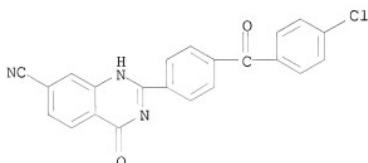

trials. The best validated HypoGen model consists of four pharmacophore features; (1) two hydrogen bond acceptors, (2) one hydrogen bond donor and (3) one hydrophobic. This pharmacophore model correlates well with the docking model, one hydrogen bond acceptor is necessary for the H-bond interaction with Val135, and second hydrogen bond acceptor is important for the H-bond interactions with Arg141 and the hydrophobic feature may be required for the weak H-bond interactions with Asp133. The comparative model was developed from analog and structure-based models like Catalyst, Glide SP & XP, Gold Fitness & ChemScore and Ligand Fit using multiple linear regression anal. A virtual library of 10,000 mols. was generated employing the fragment and knowledge-based approach and the comparative model was used to predict the activities of these mols. The H-bond with Arg141 appears to be unique to GSK-3 β and explains the high GSK-3 β selectivity observed for 1H-quinazolin-4-ones and benzo[e][1,3]oxazin-4-ones. This understanding of protein-ligand interactions and mol. recognition increases the rapid development of potent and selective inhibitors, and also helps to eliminate the increase in number of false positives and negatives.

 AB This invention relates to screening Hsp90 inhibitors, 3h-quinazolin-4-one derivs. The inhibitors were able to bind to Hsp90 ATP binding site and the ATPase activity of the Hsp90 was used for screening the effect of the inhibitors. Treatment of MCF-7 cells with the inhibitors resulted in the repressing the expression of Her2 protein and stimulating the expression of Hsp70. The inhibitors can be used for preparation anticancer agent composition such as tablets, capsules and injections.

AB Compsns. for treating or controlling an eye infection and sequelae thereof comprise an antagonist to a Toll-like receptor (TLR), a CD14 or MD-2 coreceptor thereof, or a combination thereof, and an anti-infective agent. The compsns. can also include another anti-inflammatory medicament. The claimed Toll-like receptor antagonists include sequences of anti-human TLR antibodies comprising a heavy-chain complementarity determining region (CDR)

and

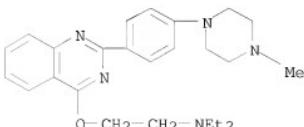

a light-chain CDR and sequences of oligonucleotide antagonists. The invention also claims TLR antagonists that comprise ligands of vitamin D receptor. The invention further claims compds. that inhibit activation of a human TLR signaling pathway such as soluble form of an extracellular domain of a human TLR that recognizes a microbe-expressed mol. structure, or a soluble form of the TLR coreceptors CD14 or MD-2. The oligonucleotide ODN 2088 provided dose-dependent inhibition of production of pro-inflammatory chemokines MIP-2, KC, TNF- α , IL-6 by murine neutrophils that were activated by bacterial DNA, whole killed bacteria, or a stimulatory oligonucleotide.

I

AB Novel 2-[4-(aminoalkoxy)phenyl]-4(3H)-quinazolinone derivs. were identified as potent human H3 receptor inverse agonists. After systematic modification of lead 5a, the potent and selective analog 5r (I) was identified. Elimination of hERG K+ channel and human α 1A-adrenoceptor activities is the main focus of the present study.

 AB Pharmacol. inhibition of fatty acid amide hydrolase (FAAH) activity leads to increased levels of fatty acid amides. Esters of alkylcarbamic acids are disclosed that are inhibitors of FAAH activity. Compdns. disclosed herein inhibit FAAH activity. Described herein are processes for the preparation of esters of alkylcarbamic acid compdns., compnps. that include them, and methods of use thereof. Thus, to prepare a parenteral pharmaceutical composition for injection, 100 mg of a water-soluble salt of a compound of the invention was dissolved in DMSO and mixed with 10 mL of 0.9% sterile

saline; the mixture was incorporated into dosage form suitable for administration by injection.

AB Title compds. I [each W independently = C or N, wherein if W is N, then p = 0 or 1 and if W is C, then p = 1; X = CR11, N, NR11, etc.; Y = CR11, CO, CS, S, etc.; R1 and R3 independently = H, OH, halo, alkyl, etc.; R2 = H, halo, alkoxy, etc.; R4 = H; each R5 and R9 independently = H, halo, alkyl,

alkenyl, or alkynyl; R6 and R8 independently = H, halo, heterocyclyl, etc.; R7 = H, OH, alkoxy, etc.; R10 = H or Me; R11 = H, unsubstituted alkyl, alkenyl, or alkynyl; or two adjacent substituents selected from R1, R2, R3, R5, R6, R7, R8, R9, R10, and R11 are connected to form aryl, heteroaryl, cycloalkyl, or heterocyclyl; or each R5 or R9 may independently be taken together with R10 or R11 to form aryl, heteroaryl, cycloalkyl, or heterocyclyl; with provisions], and their pharmaceutically acceptable salts, are prepared and disclosed as cardiovascular agents. Thus, e.g., II was prepared by chlorination of 2-methyl-4,6-dimethoxybenzoic acid followed by amidation with methylamine, cyclocondensation with 4-(2-tert-butylidimethylsiloxy)-3,5-dimethylbenzonitrile, and deprotection. Select I were evaluated in ApoA-I mRNA quantification assays, e.g., II demonstrated activity by causing a >15% increase in ApoA-I mRNA at a concentration less than or equal to 100 μ M.

AB Title compds. I [each W independently = C or N; X = N or CH; each R1 and R3 independently = H or alkoxy; R2 = H, alkyl, or alkoxy; R4, R5, and R10 = H; each R6 and R8 independently = H, Cl, alkyl, or alkoxy; R7 = NH2, OH, alkoxy, or alkyl substituted with a heterocyclil; or two adjacent substituents selected from R6, R7, or R8 are connected to form a heterocyclil; p = 0 or 1; with provisions], and their pharmaceutically acceptable salts, are prepared and disclosed as cardiovascular agents. Thus, e.g., II was prepared by chlorination of 2-methyl-4,6-dimethoxybenzoic acid followed by amidation with methylamine, cyclocondensation with 4-(2-tert-butyldimethylsiloxy)-3,5-dimethyl benzonitrile, and deprotection. Select I were evaluated in ApoA-I mRNA quantification assays, e.g., II demonstrated activity by causing a >15% increase in ApoA-I mRNA at a concentration less than or equal to 100 μ M.

AB This invention is directed to compds. of formula I as a stereoisomer, enantiomer, tautomer thereof or mixts. thereof; or a pharmaceutically acceptable salt, solvate or prodrug thereof, for the treatment and/or prevention of sodium channel-mediated diseases or conditions, such as pain. Compds. of formula I wherein ring A is fused (hetero)aryl; each R₁

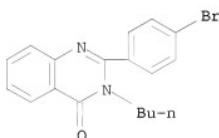

is independently H, (halo)alkyl, (halo)alkenyl, (halo)alkynyl, halo, cycloalkyl(alkyl), cycloalkylalkenyl, cycloalkylalkynyl, (hetero)aryl, aralkyl, etc.; R2 is H, (halo)alkyl, (halo)alkenyl, (halo)alkynyl, cycloalkyl(alkyl), cycloalkenyl, (hetero)aryl, etc.; R3 is H, (halo)alkyl, (halo)alkenyl, (halo)alkynyl, halo, cycloalkyl(alkyl), cycloalkylalkenyl, cycloalkylalkynyl, (hetero)aryl, aralkyl, aralkenyl, etc.; and their stereoisomers, enantiomers, tautomers, mixts. of stereoisomers, mixts. of enantiomers, mixts. of tautomers, pharmaceutically acceptable salts, solvates and prodrugs thereof, are claimed. Example compound II was prepared by hydrolysis of 2-butyl-3-[4-[(diphenylmethylidene)amino]phenyl]quinazolin-4(3H)-one. All the invention compds. were evaluated for their sodium channel inhibitory activity. From the assay, it was determined that compound II exhibited IC₅₀ value in the range of 10 - 100 nM.

AB The present invention provides methods for discovering agents that are effective in reversing epigenetic silencing by inhibiting the interaction of methyl-binding (MBD) proteins with methylated genomic DNA. Also provided are methods for reactivating silenced genes having CpG island hypermethylation along with methods for treatment and prevention of diseases, such as cancer and sickle cell anemia, by administering an agent that modulates methyl-binding domain (MBD) protein-mediated transcriptional repression, thereby increasing gene transcription to prevent or treat disease. Addnl., compds. identified by the present invention useful for treatment and prevention of diseases, such as cancer and sickle cell anemia, are provided.

AB The present invention relates to a V3 antagonist for use in the treatment of chronic pain, in particular neuropathic pain. Thus, the vasopressin type 3 antagonist 2-[2-(3-Chlorophenyl)-4-oxo-6-(3-piperidin-1-ylpropoxy)-4H-quinazolin-3-yl]-N-isopropylacetamide (Compound 2) was tested on mech. hyperalgesia in a rat model of inflammatory pain. Rats were dosed orally with either vehicle or Compound 2 (3-30 mg/kg); readings were then made at 30 min and 2 h post drug administration. It was found that oral administration of Compound 2 (5.7, 18.9 or 56.6 µmol/kg) reversed mech. hyperalgesia induced by complete Freund's adjuvant in a dose-dependent fashion; the peak antialgesic effect was observed at 30 min post drug administration; the calculated ED50 value at peak effect was 19.2 µmol/kg p.o. These data demonstrate that the V3 receptor antagonist Compound 2 possesses potent oral antialgesic activity in a rat model of chronic inflammatory pain.

AB The present invention relates to quinazolinone compds. of general structure I (wherein X is (un)substituted C1-alkyl; R6 and R7 are independently alkyl, alkenyl, alkynyl, etc.; R8, R10 are aryl, heteroaryl, cycloalkyl, etc.; R9 is H, alkyl, acyl, etc.) useful as modulators of TGR5 and methods for the treatment or prevention of metabolic, cardiovascular, and inflammatory diseases. Synthetic procedures for preparing I are exemplified. Example compound II was prepared by reacting 2-(4-Fluorophenyl)-4H-benzo[d][1,3]oxazin-4-one with hydrazine to provide 3-amino-2-(4-fluorophenyl)quinazolin-4(3H)-one which was subsequently reacted with 4-bromobenzyl bromide. In an assay that measured cAMP production by HEK-293 cells transfected with TGR5, II had an EC₅₀ of ≤ 10 μM.

 DOCUMENT TYPE: Journal; (online computer file)
 LANGUAGE: English
 AB 3D-QSAR and mol. docking anal. were performed to explore the interaction of estrogen receptors (ER α and ER β) with a series of 3-arylquinazolinethione derivs. Using the conformations of these compds. revealed by mol. docking, CoMFA anal. resulted in the first quant. structure-activity relation (QSAR) and first quant. structure-selectivity relation (QSSR) models predicting the inhibitory activity against ER β and the selectivity against ER α . The q2 and R2 values, along with further testing, indicate that the obtained 3D-QSAR and 3D-QSSR models will be valuable in predicting both the inhibitory activity and selectivity of 3-arylquinazolinethione derivs. for these protein targets. A set of 3D contour plots drawn based on the 3D-QSAR and 3D-QSSR models reveal modifications of substituents at C2 and C5 of the quinazoline which my be useful to improve both the activity and selectivity of ER β /ER α . Results showed that both the steric and electrostatic factors should appropriately be taken into account in future rational design and development of more active and more selective ER β inhibitors for the therapeutic treatment of osteoporosis.

II

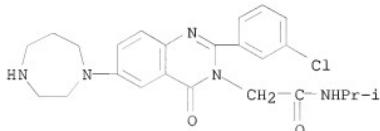

- AB The invention relates to compds. of formula I, pharmaceutically acceptable salts, prodrugs or solvates thereof. Compds. of formula I wherein R1 is (un)substituted C1-6 alkyl, (un)substituted C3-6 cycloalkyl, (un)substituted cycloalkyl-C1-3 alkyl, C2-6 alkenyl and C2-6 alkynyl; R2 is (un)substituted C6-10 aryl, (un)substituted 5- to 10-membered heteroaryl, and C4-7 cycloalkyl; R3 is (un)substituted C1-6 alkyl, (un)substituted C1-6 alkoxy and halo; R4 is (un)substituted aminoethylamino and (un)substituted aminopropylamino; X is CH and N; and their pharmaceutically acceptable salts, and solvates thereof, are claimed. Example compound II was prepared by a general procedure (procedure given). All the invention compds. were evaluated for their V3 binding affinity (some data given).

- AB** The present invention relates to inhibitors of microbial heme oxygenase, especially heme oxygenase of *Pseudomonas aeruginosa* (pa-HO) and *Neisseria meningitidis* (nm-HO) and their use for treatment of microbial infections and bioremediation. The inhibitors of microbial heme oxygenase are useful as a new class of antimicrobial agents to target infections that are persistently difficult to combat with the current spectrum of antimicrobial agents. Screening methods for selecting inhibitors of microbial heme oxygenase are also described. Thus, the compound I was tested in vitro for inhibiting microbial heme oxygenase by testing its ability to bind to the microbial heme oxygenase and to inhibit the production of α -biliverdin in *Escherichia coli* cells expressing said microbial heme oxygenase; the binding affinity (KD) against nm-HO and pa-HO activity was $12.2 \pm 1.0 \mu\text{M}$ and $15.9 \pm 1.1 \mu\text{M}$, resp., and no biliverdin was observed

 AB The peptide hormone ghrelin is the endogenous ligand for the type 1a growth hormone secretagogue receptor (GHS-R1a) and the only currently known circulating appetite stimulant. GHS-R1a antagonism has therefore been proposed as a potential approach for obesity treatment. More recently, ghrelin has been recognized to also play a role in controlling glucose-induced insulin secretion, which suggests another possible benefit for a GHS-R1a antagonist, namely, the role as an insulin secretagogue with potential value for diabetes treatment. In our labs., piperidine-substituted quinazolinone derivs. were identified as a new class of small-mol. GHS-R1a antagonists. Starting from an agonist with poor oral bioavailability, optimization led to potent, selective, and orally bioavailable antagonists. In vivo efficacy evaluation of selected compds. revealed suppression of food intake and body weight reduction as well as glucose-lowering effects mediated by glucose-dependent insulin secretion.

A8 Disclosed are quinoline and quinazoline compds. of formula I, which modulate the activity of the gated ion channels compds. that modulate these gated ion channels are useful in the treatment of diseases and disorders related to pain, inflammation, the neurol. system, the gastrointestinal system and genitourinary system. The preferred compds. include quinoline or quinazoline derivs. substituted at the 4- position via NH, C(O) or O moieties. Compds. of formula I wherein dashed line is single or double bond, wherein when the dashed lines is single bond, N of the ring may be bond to H and R1; R1, R3 and R4 are independently H, (un)substituted amine, CN, NO₂, CO₂H, and, halo, etc.; R2 is H, (un)substituted amino, amide, halo, NO₂, (un)substituted aryl, etc.; R5 is N, C and CH; and their pharmaceutically acceptable salts, enantiomers, stereoisomers, rotamers, tautomers, diastereoisomers, and racemates thereof, are claimed. Example compound II was prepared by substitution of 4-chloro-2-methylinquinoline with 1-benzylpiperidin-4-ol. All the invention compds. were evaluated for their cation gated ion channel modulatory activity.

 OTHER SOURCE(S): CASREACT 148:308279
 AB Et 4-[2-(2-chlorophenyl)-4-oxo-3-hydroquinazolin-3-yl]benzoate which reacts with hydrazine hydrate in presence of methanol resulted into N-amino[4-[2-(2-chlorophenyl)-4-oxo-(3-hydroquinazolin-3-yl)]phenyl]carboxamide (I). Compound I on treatment with aryl isothiocyanates in presence of acetone is converted into aryl-N-[{[4-[2-(2-chlorophenyl)-4-oxo-(3-hydroquinazolin-3-yl)]phenyl]carbonylamino}amino]thioxomethyl]amides. The last amide compds., in presence of sulfuric acid yielded aryl-N-(5-{[4-[2-(2-chlorophenyl)-4-oxo-(3-hydroquinazolin-3-yl)]-phenyl}(1,3,4,thiadiazol-2-yl))amides. Newly synthesized compds. were screened for their antibacterial and antifungal activities on Escherichia coli, Staphylococcus aureus, Pseudomonas aeruginosa, Staphylococcus

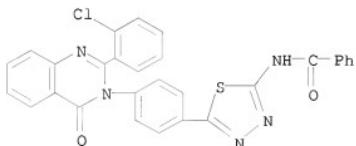

pyogenes, C. albicans, A. niger and A. clavatus.

 AB Our group is developing a novel technol., enzyme-mediated cancer imaging and therapy (EMCTT), that aims to entrap radioiodinated compds. within solid tumors for noninvasive tumor detection and therapy. In this approach, a water-soluble, radioiodinated prodrug is hydrolyzed in vivo to a highly water-insol. compound by an enzyme overexpressed extracellularly by tumor cells. We have synthesized and characterized the water-soluble prodrug, 2-(2'-phosphoryloxyphenyl)-6-[125I]iodo-4-(3H)-quinazolinone [125I]5, which is readily hydrolyzed by alkaline phosphatase, an enzyme expressed by many tumor cell lines, to a water-insol. drug, 2-(2'-hydroxyphenyl)-6-[125I]iodo-4-(3H)-quinazolinone [125I]1. In the course of our study, we discovered that ammonium 2-(2'-phosphoryloxyphenyl)-6-tributylstannyl-4-(3H)-quinazolinone, an intermediate in the radioiodination of the prodrug, exists as two isomers (3 and 4) whose radioiodination leads, resp., to [125I]6 and [125I]5. These prodrugs have different in vitro and in vivo biol. activities. Compound 6 is not hydrolyzed by alkaline phosphatase (ALP), whereas 5 is highly soluble (mg/mL) in aqueous solution and is rapidly dephosphorylated in the presence of ALP to 1, a water-insol. mol. (ng/mL). Mouse biodistribution studies

indicate that [125I]6 has high uptake in kidney and liver and [125I]5 has very low uptake in all normal organs. Compds. 3 and 6 are converted, resp., to 4 and 5 after incubation in DMSO. The stability of 5 in human serum is high. The min. ALP concentration needed to hydrolyze 5 is much greater

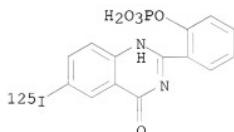

than the ALP level in the blood of patients with cancer, and the latter should not affect the pharmacokinetics of the compound. Incubation of 5 with viable human and mouse tumor-cell lines-but not with normal human cells and mouse tissues-leads to its hydrolysis and the formation of large crystals of 1. We expect that 5 will also be hydrolyzed in vivo by tumor cells that express phosphatase activity extracellularly and anticipate the specific precipitation of radioiodinated 1 within tumor cell clusters. This should lead to high tumor-to-normal-tissue ratios and enable imaging (SPECT/PET) and radionuclide therapy of solid tumors.

AB We are developing a noninvasive approach for targeting imaging and therapeutic radionuclides to prostate cancer. Our method, Enzyme-Mediated Cancer Imaging and Therapy (EMCIT), aims to use enzyme-dependent, site-specific, *in vivo* precipitation of a radioactive mol. within the extracellular space of solid tumors. Advanced methods for data mining of the literature, protein databases, and knowledge bases (IT.Omics LSGraph and Ingenuity Systems) identified prostatic acid phosphatase (PAP) as an enzyme overexpressed in prostate cancer and secreted in the extracellular space. Using AutoDock 3.0 software, the prodrug ammonium 2-(2'-phosphoryloxyphenyl)-6-iodo-4-(3H)-quinazolinone (IQ2-P) was docked in silico into the X-ray structure of PAP. The data indicate that IQ2-P docked into the PAP active site with a calculated inhibition constant (Ki) more favorable than that of the PAP inhibitor α -benzylaminobenzylphosphonic acid. When 125IQ2-P, the radioiodinated form of the water-soluble prodrug, was incubated with PAP, rapid hydrolysis of the compound was observed as exemplified by formation of the water-insol. 2-(2'-hydroxyphenyl)-6-[125I]iodo-4-(3H)-quinazolinone (125IQ2-OH). Similarly, the incubation of IQ2-P with human LNCaP, PC-3, and 22Rv1 prostate tumor cells resulted in the formation of large fluorescent IQ2-OH crystals. No hydrolysis was seen in the presence of normal human cells. Autoradiog. of tumor cells incubated with 125IQ2-P showed accumulation of radioactive grains (125IQ2-OH) around the cells. We anticipate that the EMCIT approach will enable the active *in vivo* entrapment of radioimaging and radiotherapeutic compds. within the extracellular spaces of primary prostate tumors and their metastases.

AB The present invention relates to polyphenol-like compds. I [X = CR11, CR11R13, C:O, C:S, O, S, SO, SO₂, N, NR11; Y = CR12, CR12R14, C:O, C:S, O, S, SO, SO₂, N, NR12 (wherein, if Y = O, then X ≠ C:O); W = C, N, (wherein, if W = N, then p = 0 and if W = C, then p = 1); R1, R2, R3, R4, R5, R6, R7, R8, R9, R10, R11, R12, R13, R14, R17 = alkoxy, aryloxy, alkyl, alkenyl, alkynyl, amide, amino, aryl, arylalkyl, carbamate, carboxy, CN, cycloalkyl, ester, ether, CHO, halogen, haloalkyl, heteroaryl, heterocyclyl, H, OH, ketone, NO₂, phosphate, sulfide, sulfinyl, sulfonyl, sulfonic acid, sulfonamide, thioketone; two adjacent selected from R1 - R14 are connected in a 5- to 6-membered ring to form a bicyclic aryl, heteroaryl or heterocycle; z1, z2, z3 = single or double bond (wherein, if at least one W ≠ N, then (a) X = Y = C:O, (b) X = NR11 and Z2 = double bond), or (c) two adjacent substituents R5, R6, R7, R8, R9 are connected in a 5- to 6-membered ring to form a bicyclic aryl, heteroaryl or heterocycle] and pharmaceutically acceptable salts and hydrates thereof, that are useful for inhibiting VCAM-1 expression, MCP-1 expression and/or SMC proliferation in a mammal. Thus, 2-(4-Hydroxyphenyl)pyrano[2,3-b]pyridin-4-one (II) was prepared from Et 2-chloronicotinate, via methanolysis with NaOMe in MeOH, condensation with the sodium salt of 4-methoxyacetophenone in DMF, and thermal O-demethylation/intramol. cyclocondensation with pyridine hydrochloride. The disclosed compds. are useful for regulating markers of inflammatory conditions, including vascular inflammation, and for treatment and prevention of inflammatory and cardiovascular diseases and related disease states. The inhibitory activity of II was determined [\geq 40% inhibition of VCAM-1 expression; <40% inhibition of MCP-1 expression; <40% inhibition of SMC proliferation].

LANGUAGE: English
AB As part of the development of enzyme-mediated cancer imaging and therapy,
a novel technol. to entrap water-insol. radioactive mols. within solid
tumors, we show that a water-soluble, radioactive quinazolinone prodrug,
ammonium 2-(2'-phosphoryloxyphenyl)-6-[125I]iodo-4-(3H)-quinazolinone
(125IQ2-P), is hydrolyzed by alkaline phosphatase to a water-insol.,
radiolabeled drug, 2-(2'-hydroxyphenyl)-6-[125I]iodo-4-(3H)-quinazolinone
(125IQ2-OH). Biodistribution data suggest the existence of two isoforms
of the prodrug (IQ2-B(I) and IQ2-P), and this has been confirmed by their
synthesis and characterization. Structural differences of the two
isoforms have been examined using *in silico* mol. modeling techniques and
docking methods to describe the interaction/binding between the isoforms
and human placental alkaline phosphatase (PLAP), a tumor cell,
membrane-associated, hydrolytic enzyme whose structure is known by X-ray
crystallog. determination. Docking data show that IQ2-P, but not IQ2-P(I), fits
the active binding site of PLAP favorably and interacts with the catalytic
amino acid Ser92, which plays an important role in the hydrolytic process.
The binding free energies (ΔG_{binding}) of the isoforms to PLAP
predict that IQ2-P will be the better substrate for PLAP. The *in vitro*
incubation of the isoforms with PLAP leads to the rapid hydrolysis of
IQ2-P only and confirms the *in silico* expectations. Fluorescence
microscopy shows that *in vitro* incubation of IQ2-P with mouse and human
tumor cells causes the extracellular, alkaline phosphatase-mediated hydrolysis
of the mol. and precipitation of fluorescent crystals of IQ2-OH. No
hydrolysis is seen in the presence of normal mouse and human cells. Furthermore, the
intratumoral injection of 125IQ2-P into alkaline phosphatase-expressing solid
human tumors grown s.c. in nude rats results in efficient hydrolysis of

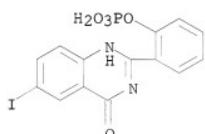

the compound and retention of .apprx.70% of the injected radioactivity, whereas similar injection into normal tissues (e.g., muscle) does not produce any measurable hydrolysis (.apprx.1%) or retention of radioactivity at the injected site. These studies support the enzyme-mediated cancer imaging and therapy technol. and show the potential of such quinazolinone derivs. in the in vivo radio-detection (123I/124I) and therapy (131I) of solid tumors.

AB Title compds. represented by the formula I [wherein R1 = (cyclo)alkyl, alkenyl, Ph, etc.; R2 = (heteroaryl or cycloalkyl; R3 = H, alkyl(oxy) or halo; R4 = pyridinylmethoxy, (alkyl)aminoalkyleneoxy, (alkyl)aminophenyl, etc.; and pharmaceutically acceptable salts or solvates thereof] were prepared as vasopressin V3 receptor antagonists. For example, II was provided in a multi-step synthesis starting from the reaction of 2-amino-N-[(isopropylcarbamoyl)methyl]-5-[3-(piperidin-1-yl)propoxy]benzamide (preparation given) with 5-quinalinecarboxaldehyde. Selected I showed biol. activity with human V3 receptor. Thus, I and their pharmaceutical compns. are useful as vasopressin V3 antagonists, particularly for the treatment of depression.

 AB Anthranilic acid on reaction with an aromatic acid chloride in presence of pyridine cyclizes to 2-aryl-4-oxo-3,1-benzoxazines, which on treatment with hydrazine hydrate in dry pyridine affords 2-aryl-3-amino-4-oxo-(3H)-quinazolines. Reaction of quinazolines with Et chloroacetate in presence of sodium acetate yields 2-aryl-4-oxo-(3H)-quinazolin-3-aminoethyl acetates, which on hydrolysis furnishes 2-aryl-4-oxo-(3H)-quinazolin-3-amino-acetic acids. Reaction of 2-aryl-4-oxo-(3H)-quinazolin-3-amino-acetic acids. with sodium nitrite and conc HCl results in 2-aryl-4-oxo-(3H)-quinazolin-nitrosoaminoacetic acids. Heating the later compds. with acetic anhydride gives N-(2-aryl-4-oxo (3H) quinazolinyl) sydnone in yields varying from 30 to 50%. The sydnone compds. were screened for their antiviral activity in vitro.

AB The invention relates to compds. of the formula I and to pharmaceutically acceptable salts and solvates thereof, wherein the variables are defined herein. The invention also relates to methods of treating abnormal cell growth in mammals by administering the compds. of formula I and to pharmaceutical compns. for treating such disorders that contain the compds. of formula I. The invention also relates to methods of preparing the compds. of formula I. Compds. of formula I wherein Q, Q1, Q2, and Q3 are independently N, CH₂ or CH, where not more than two of the Qs are N; T is CH or N; T1 is O, NH or NMe; X is NH, O, CH=, or NR'; R' is (un)substituted alkyl; Y is CO, CH₂, or CONH and derivs.; Z is H or (un)substituted alkyl; XY and X can form a heterocyclic ring or X and Y can form a heterocyclic ring; R and V are independently H, halo, alkyl, halogenated alkyl, alkoxy, OH, NH₂, CN; R1 is (un)substituted (hetero)aryl, (un)substituted aryloxy, (un)substituted arylsulfanyl, (un)substituted arylvinyl or (un)substituted arylalkyl(amino), etc.; R3 is CO₂H, tetrazole, CO₂CHR4OCOR4 or CONH₂ and derivs.; R4 is H or alkyl; and their pharmaceutically acceptable salts and solvates are claimed in this invention. Example compound II was prepared by substitution of compound II with benzoxazole-2-thiol followed by hydrolysis at the ester. Addnl. 1400 example compds. were prepared in this invention. All invention compds. were evaluated for their pin1 inhibitory activity. Example compound II showed 10% inhibition at 1 μM and 73% inhibition at 10 μM concentration. Most of the invention compds. showed good inhibitory activity at 10 μM concentration.

- AB** The invention is related to substituted quinazolinone derivs. I [R₁ = (un)substituted pyrrolidin-3-yl, piperidin-3-yl, morpholin-4-yl, etc.; R₂ = H, (un)substituted cyclo/alkyl, pyridinyl, Ph, etc.; R₃ = H, halo, haloalkyl, (un)substituted Ph, alkyl, etc.; L = a bond, O, CO, S, SO₂, NHSO₂, NH and derivs., etc.; X = (CH₂)_m; m = 0-2; Y = (CH₂)_n; n = 1-2; p = 0-2; with provisos], and their pharmaceutically acceptable salts, and their compns., and methods for treating diabetes, obesity and related disorders, and regulation of glucose homeostasis and food intake (e.g., stimulation and suppression) (no data). The invention is also related to the preparation of quinazolinones I. Five biol. tests are given (no data). Thus, II•TFA was prepared by amination of 5-fluoro-2-nitrobenzoic acid with N-methylbutylamine, reduction of the nitro compound, cyclocondensation with o-anisoyl chloride, reaction with tert-Bu 3-(aminomethyl)piperidine-1-carboxylate (intermediate not isolated), and Boc-deprotection in the presence of TFA.

AB Tariquidar (XR9576) analogs, modulators of cancer multidrug resistance (MDR), were subjected to QSAR and 3D-QSAR analyses. The structural features contributing to anti-MDR activity were identified by the Free-Wilson anal. and pharmacophore search using Hoechst 33342 as a template. 3D-QSAR CoMFA and CoMSIA models were derived and tested. The best models yielded an external predictivity of 0.66-0.75 squared correlation coefficient and outlined HB-acceptor, steric, and hydrophobic fields as the most important 3D properties. On the basis of the QSAR and 3D-QSAR analyses it was suggested that the strong inhibitory potency of the compds. studied is related to the presence of a bulky aromatic ring system with a 3rd positioned heteroatom toward the anthranilamide nucleus in the opposite end of the tetrahydroquinoline group. The results can help in directing the rational design of new generations of potent P-glycoprotein MDR modulators.

II

AB Title compds. I [R1 = aryl, aralkyl, alkoxy, etc.; further details on R1 are given.; R2, R3 = H, amino, alkylamino, etc.; R4 = Q1, etc.; R5 = H, alkyl, hydroxy, etc.; R7, R8 = alkyl, arylalkyl, heteroarylalkyl, with the proviso that R7 and R8 are not alkyl simultaneously; X1 = NH, O, S; Y = N, C; Ar = optionally substituted aryl, heteroaryl with alkyl, alkoxy, halo; ring A = Ph, heteroaryl containing N, O] were prepared For example, reaction of

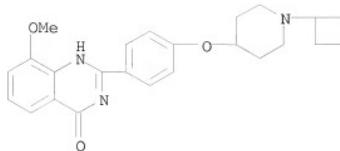

2-(4-hydroxyphenyl)-3,8-dimethyl-4(3H)-quinazolinone, e.g., prepared from 3-methyl-2-aminobenzoic acid in 3 steps, with 1-chloro-3-bromopropane and K2CO3 followed by in-situ treatment with piperidine afforded compound II [R = methyl; X = piperidin-1-yl]. In histamine analog binding inhibition assays, the IC50 value of compound II [R = H; X = pyrrolidin-1-yl] was 0.68 nM. Compds. I are claimed useful for the treatment of diabetes, obesity, etc.

AB The present invention relates to 2,3-diarylquinazolinone compds. that are useful for treating cellular proliferative diseases, for treating disorders associated with KSP kinesin activity, and for inhibiting KSP kinesin. The invention also related to compns. which comprise these compds., and methods of using them to treat cancer in mammals. Compound preparation is included.

AB For three target proteins with different binding pocket characteristics (size and shape, hydrophobicity, hydrogen-bonding) a structure-based validation of the translationally and rotationally invariant 3D-QSAR technique MaP is performed (MaP: Mapping Property distributions of mol. surfaces). The structure-based validation procedure comprises two steps: first, QSAR models are derived without using the information of the target protein. Second, the models are back-projected into the crystal structure of the binding pockets and interpreted. It is demonstrated that MaP is able to identify characteristics important for ligand binding in the cases studied here. Moreover, it is demonstrated that MaP is a versatile 3D-QSAR technique since good, predictive models could be obtained for all three data sets showing distinct characteristics.

AB Compds. I [A = (un)substituted 5-6 membered (hetero)aryl, cycloalkyl, 5-8 membered heteroaryl; X = CO, CS, SO₂; W = N, CR₃ (wherein R₃ = H, F, (un)substituted (hetero)aryl, etc.); Z = a bond, CH₂, CHF, CH:CH, etc.; Y = (CR₅R₆)_n (n = 0-4; R₅, R₆ = H, F, (un)substituted (hetero)aryl, etc.); R₁ = (un)substituted (hetero)aryl, cycloalkyl, 5-7 membered heterocyclyl, alkyl; R₂ = CF₃, (un)substituted alkyl, (hetero)aryl, cycloalkyl, 3-7 membered heterocyclyl], compns. and methods are provided which are useful in the treatment of diseases through the modulation of potassium ion flux through voltage-dependent potassium channels. More particularly, the invention provides quinazolinones, compns. and methods that are useful in the treatment of central or peripheral nervous system disorders (e.g., migraine, ataxia, Parkinson's disease, bipolar disorders, trigeminal neuralgia, spasticity, mood disorders, brain tumors, psychotic disorders, myokymia, seizures, epilepsy, hearing and vision loss, Alzheimer's disease, age-related memory loss, learning deficiencies, anxiety and motor neuron diseases, maintaining bladder control or treating urinary incontinence) and as neuroprotective agents (e.g., to prevent stroke and the like) by modulating potassium channels associated with the onset or recurrence of the indicated conditions. E.g., a multi-step synthesis of II, starting from 2-trifluoromethoxyaniline, was given. The compound II and analogs were subsequently coupled with isocyanates and carboxylic acids to provide the compds. I such as 1-(2-cyclohexyl-4-oxo-4H-quinazolin-3-yl)-3-(2-fluorobenzyl)urea. The representative compds. I were tested for the ability to open voltage-gated potassium channels in the NG-108-15 FLIP assay (data given for selected compds. I).

AB: The invention provides methods and compns. useful for modulating signaling through Toll-like receptors (TLR). The methods involve contacting a TLR-expressing cell with a small mol. having a core structure including at least two rings. Certain of the compds. are 4-primary amino quinolines. Many of the compds. and methods are useful specifically for inhibiting immune stimulation involving at least one of TLR9, TLR8, TLR7, and TLR3. The methods may have use in the treatment of autoimmunity, inflammation, allergy, asthma, graft rejection, graft vs. host disease, infection, sepsis, cancer, and immunodeficiency.

 DOCUMENT TYPE: Journal

LANGUAGE: English
 AB We previously reported that HMJ-38 was the most potent 2-phenyl-4-quinazolinone derivative in inhibiting tubulin polymerization and showed significant cytotoxicity against several human tumor cell lines. In this work, we studied its cytotoxic effect on HL-60 leukemia cells and the underlying mechanisms. We first investigated the effects of HMJ-38 on viability, cell cycle and induction of apoptosis in HL-60 and normal human peripheral blood mononuclear cells (PBMC). After 24-h treatment with HMJ-38, a dose- and time-dependent decrease in the viability of HL-60 cells was observed and the approx. IC₅₀ was 4.48 μM. The cytotoxic effect of HMJ-38 on PBMC was less significant than that on HL-60 cells, either with 24 or 48 h of treatment. Cell cycle anal. showed that HMJ-38 induced significant G₂/M arrest and apoptosis in HL-60 cells. The HMJ-38-induced G₂/M arrest occurred before the onset of apoptosis. Within 24 h of treatment, HMJ-38 influenced the CDK/cyclin B activity by increasing Chk1, Wee1 and p21 and decreasing Cdc25C protein levels. The HMJ-38-induced apoptosis was further confirmed by morphol. assessment and DNA fragmentation assay. Induction of apoptosis in HMJ-38-treated HL-60 cells was accompanied by an apparent increase of cytosolic cytochrome c, down-regulation of Bcl-2, up-regulation of Bad and cleavage of pro-caspase-9, -3 and poly(ADP)ribosylpolymerase (PARP). The results of the significant reduction of caspase activities and apoptosis by caspase inhibitors indicated that the HMJ-38-induced apoptosis was mainly mediated by activation of caspases-9 and -3. HMJ-38 also activated ERK in HL-60 cells. Pre-incubating cells with ERK inhibitors (U0126 and PD98059) attenuated the HMJ-38-induced ERK activation and apoptosis. Nevertheless, cells remained arrested in G₂/M. These results suggest that HMJ-38 is a potent anticancer drug and it shows a remarkable action on cell cycle before commitment for apoptosis is reached.

IT 299897-92-0, HMJ 38

ASSIGNMENT HISTORY FOR US PATENT AVAILABLE IN LSUS DISPLAY FORMAT

OTHER SOURCE(S): MARPAT 140:423688

GI

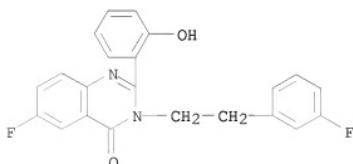

AB The title compds. I [R1, R2, R3 = H, halo, CN, CF₃, OCF₃, alkyl, alkoxy, etc.; R4 (optional) = H, halo, CN, CF₃, OCF₃, alkyl, alkoxy, etc.; X = C or N; R5 = H, alkyl, furyl, thienyl, styryl, pyridyl, (substituted)phenyl; R6 = H, alkyl, or -(CH₂)_n-X1-R7; n = 0-2; X1 = O, CO, CHOH, alkyl, or a single bond; R7 = an aromatic group optionally substituted with 1-3 substituents selected from H, halo, CN, CF₃, OCF₃, alkyl, alkoxy, etc.] were prepared as calcium receptor antagonists for the treatment of bone diseases. Thus, reaction of 2-phenyl-benzod[1,3]oxazin-4-one (preparation given) with phenethylamine gave compound II. Methods to determine the biol. activity of the compound of this invention were demonstrated.

AB Title compds. [I; M = atoms to form a (substituted) 5-6 membered aromatic or dihydroarom. (heterocyclic) ring; 1 of P4, M4 = ZAB, the other = G1G; D = (substituted) (Ph-, pyridyl-, pyrimidyl-, pyrazinyl-fused) 5-6 membered (heterocyclic) ring, etc.; G1 = null, (substituted) alkylene, alkenylene, alkynylene, etc.; Z = bond, (substituted) alkylene, alkyleneaminoalkylene, etc.; A, Y = (substituted) carbocyclyl, heterocyclyl; B = Y, XY, (alkylene)carbonylamino, etc.; X = (substituted) alkylene, imino, CO, etc.; with provisos], were prepared as antithrombotics (no data). Thus, biphenyl-4-carboxylic acid was stirred 2 h with (COCl)₂ and cat. DMF in CH₂Cl₂; the residue was added to a mixture of 2-amino-5-chloro-N-(5-chloropyridin-2-yl)benzamide (preparation given), Et₃N and DAMP in CH₂Cl₂ at 0° followed by stirring overnight at room temperature to give the desired biphenylcarboxamide. This was refluxed with

HCl

in dioxane/THF to give 2-biphenyl-4-yl-6-chloro-3-(5-chloropyridine-2-yl)-3H-quinazolin-4-one.

AB The title compds. I [wherein R = (un)substituted aliphatic hydrocarbyl or cyclyl; G = a bond or a spacer; T = CH₂ or a spacer; J = N or CH; B = (un)substituted aliphatic hydrocarbyl or cyclyl; K = a bond or a spacer; Q = a bond or a spacer; ring D = (un)substituted cyclic ring; L = a bond or a spacer; ring E = (un)substituted cyclic ring; n = 0 or 1; M = a bond or a spacer; Z = a acid group] or prodrugs, or salts thereof are prepared as lysophosphatidic acids (LPA) receptor antagonists. For example, the compound II was prepared in a multi-step synthesis. II showed inhibitory activity with IC₅₀ of 0.095 μM against human EDG-2. I are useful for the treatment of urinary diseases, cancer-related diseases, proliferative diseases, inflammatory immune diseases, diseases caused by secretion failures, brain-related diseases, etc. (no data). Formulations containing I as an active ingredient were also described.

AB The title compds. I [X = NH; Y = CO, CS, C=CN, or X and Y together form an alkene, or cycloalkyl; R1 = (un)substituted-heterocycle, -heterocyclylcarbonyl, NHSO2R3; R2 = electron withdrawing group; R3 = H, (un)substituted alkyl or aryl; R4 = (un)substituted aryl with provisions] and their pharmaceutically acceptable salts are prepared and disclosed as antibacterial agents. Thus, e.g., II was prepared by amidation of 3-((5-chloro-2,3-dihydro-1H-indol-1-yl)sulfonyl)benzoyl chloride (preparation given) with 3-(2-amino-5-bromophenyl)-1,2,4-oxadiazol-5(4H)-one. In assays, the min. inhibitory concentration values (μ g/mL) ranged from 0.125 - >128. As antibacterial agents I are useful for sterilization, sanitation, antisepsis, and disinfection.

AB Title compds. I [wherein R1 = independently halogen, (halo)alkyl, alkoxy, hydroxalkyl, amino, nitro, cyano; R2, R3 = independently H, (cyclo)alkyl, haloalkyl, hydroxalkyl, or R2 and R3 together with the nitrogen atom to which they are attached form an (un)substituted heterocyclic ring; R4 = (un)substituted phenoxyphenyl, phenylthiophenyl, phenylaminophenyl, benzylphenyl, etc.; n = 0-3; p = 2-4; X = N, NH, S; Y = O, S; and pharmaceutically acceptable salts or solvates thereof] were prepared as sodium channel blockers. For example, reaction of 2-(piperidin-1-yl)ethylamine with 2-nitrobenzoyl chloride, followed by 10%

Pd/C-catalyzed reduction and condensation with 3,3-diphenylpropenal, gave II. I were formulated as tablets and i.v. solns. Selected compds. of the invention inhibited sodium channel activity with K_i values ranging from 1 nM to 3960 nM. Thus, I and their pharmaceutical compns. are useful as sodium channel blockers for the treatment of neuronal damage following global or focal ischemia, neurodegenerative conditions, such as amyotrophic lateral sclerosis (ALS), acute or chronic pain, neuropathic pain, surgical pain, tinnitus, convulsions, manic depression, arrhythmia and diabetic neuropathy (no data).

AB The title inhibitors, useful as antiarteriosclerotic and anticholesteremic agents, contain [(quinazolinonyl)benzyl]phosphonate diesters I [R1-R4 = H, halo, lower alkyl; R5 = (lower alkoxy-substituted) Ph, pyridyl; R6 = lower alkyl] as active ingredients are prepared. Thus, I (R1 = R2 = R4 = H, R3 = Cl, R5 = 3-C6H4OMe) inhibited 82% ACAT-1 activity.

GI

AB The present application describes 1,1-disubstituted cycloalkyl compds. and derivs. thereof (P4-P-M-M4; variables defined below; most of the examples contain 1,4,5,6-tetrahydro-7H-pyrazolo[3,4-c]pyridin-7-one, e.g. the trifluoroacetate of I), or pharmaceutically acceptable salt forms thereof, which are useful as inhibitors of factor Xa for treatment of a thromboembolic disorder. Although the methods of preparation are not claimed, .apprx.240 example preps. are included. A number of I exhibit Ki's of <10 μ M towards factor Xa; also some I are direct acting inhibitors (Ki < 10 μ M) of the serine protease thrombin as indicated by their ability to inhibit the cleavage of small mol. substrates by thrombin in a purified system; the specific compds. are not stated. For I: M is a 3-10 membered carbocycle or a 4-10 membered heterocycle, consisting of: C atoms and 1-3 heteroatoms = O, S(O)p, N, and NZ2; ring M is substituted with 0-3 R1a and 0-2 carbonyl groups, and there are 0-3 ring double bonds; P is fused onto ring M and is a 5, 6, or 7 membered carbocycle or a 5, 6, or 7 membered heterocycle, consisting of: C atoms and 1-3 heteroatoms = O, S(O)p, and N; ring P is substituted with 0-3 R1a and 0-2 carbonyl groups, and there are 0-3 ring double bonds; alternatively, ring P is absent and P4 is directly attached to ring M, provided that when ring P is absent, P4 and M4 are attached to the 1,2, 1,3, or 1,4 positions of ring M. One of P4 and M4 is -Z-A-B and the other -G1-G, provided that P4 and M4 are attached to different rings when ring P is present; G is consists of 2 fused rings D and E (ring D, including the two atoms of Ring E to which it is attached, is a 5-6 membered ring consisting of carbon atoms and 0-2 heteroatoms selected from the group consisting of N, O, and S(O)p; E is selected from (un)substituted Ph, pyridyl, pyrimidyl, pyrazinyl, and pyridazinyl; alternatively, ring D is absent and ring E is selected from (un)substituted Ph, pyridyl, pyrimidyl, pyrazinyl, pyridazinyl, pyrrolyl, pyrazolyl, imidazolyl, isoxazolyl, oxazolyl, triazolyl, thiienyl, and thiazolyl); G1 is absent or = (CR3R3a)1-5, etc. A = (un)substituted C3-10 carbocycle and 5-12 membered heterocycle consisting of: C atoms and 1-4 heteroatoms N, O, and S(O)p; B is Y-R4a or X-Y-R4a, provided that Z and B are attached to different atoms on A and A and R4a or X and R4a are attached to the same atom on Y; Z = a bond, -(CR3R3e)1-4-, etc. Addnl. details including provisos are given in the claims.

AB Quinazolinones, 2-substituted and 3-substituted, mainly synthesized by microwave irradiation, were subjected to anti-platelet aggregation and inhibition of superoxide anion generation assays. Interestingly,

2-phenyl-4-quinazolinone exhibited significant inhibitory activities toward platelet aggregation and neutrophil activation, and it might therefore serve as a prototype lead compound

AB Compsd. P4-P-M4 [M is a 3-10 membered carbocycle or a 4-10 membered heterocycle; P is null or a 5-7 membered carbocycle or heterocycle fused to ring M; one of P4 and M4 is -Z-A-B and the other is -G1-G, where G is (un)substituted (fused) (hetero)aryl or (hetero)cycl; G1 is null or (un)substituted optionally-functionalized alk(en)(yn)yl; Z is a bond or (hetero)alkylene; A is (substituted) 3-10 membered carbocyclyl or 5-12 membered heterocyclyl; B is a functionalized amino group (with provisos) or their pharmaceutically-acceptable salts were prepared for use as inhibitors of factor Xa. Thus, 1H-pyrazolo[3,4-c]pyridine derivative I.TFA was prepared by reactions of 3-aminobenzamide, 3-hydroxy-1-(4-iodophenyl)-4-(trifluoroacetyl)-5,6-dihydro-2(1H)-pyridinone, chloroacetyl chloride, and dimethylamine. [This abstract record is one of 47 records for this document necessitated by the large number of index entries required to fully index the document and publication system constraints.]

AB Compds. P4-P-M4 [M is a 3-10 membered carbocycle or a 4-10 membered heterocycle; P is null or a 5-7 membered carbocycle or heterocycle fused to ring M; one of P4 and M4 is -Z-A-B and the other is -G1-G, where G is (un)substituted (fused) (hetero)aryl or (hetero)cyclil; G1 is null or (un)substituted optionally-functionalized alk(en)(yn)yl; Z is a bond or (hetero)alkylene; A is (substituted) 3-10 membered carbocyclil or 5-12 membered heterocyclil; B is a functionalized amino group (with provisos) or their pharmaceutically-acceptable salts were prepared for use as inhibitors of factor Xa. Thus, 1H-pyrazolo[3,4-c]pyridine derivative I.TFA was prepared by reactions of 3-aminobenzamide, 3-hydroxy-1-(4-iodophenyl)-4-(trifluoroacetyl)-5,6-dihydro-2(1H)-pyridinone, chloroacetyl chloride, and dimethylamine. [This abstract record is one of 47 records for this document necessitated by the large number of index entries required to fully index the document and publication system constraints.]

AB Title compds. I [R1-2 = H, alkyl, alkoxy; R4 = H, alkanoyl, hydroxyalkyl, etc.; R5 = alkoxy, alkenoxy, cycloalkylalkoxy, etc.] are prepared. For instance, 2-(2-Ethoxypyhenyl)-8-methoxyquinazolin-4(3H)-one (preparation given) is treated with chlorosulfonic acid and subsequently with piperazine to give II. I inhibit growth of neoplastic cells and are useful for the treatment of patients having precancerous lesions.

IT 130239-63-3P, 7-Nitro-2-(2-Propoxyphenyl)-4(3H)-quinazolinone

GI

AB Title compds. [I, II, III; R2-R5 = H, (CH₂)nMe, OH, O(CH₂)nMe, X, amino; n = 0-4; X = F, Cl, Br; R = (CH₂)nMe, (CH₂)nCO₂(CH₂)nMe; R₆, R₇ = H, (CH₂)nMe, O(CH₂)nMe, X, amino, pyrrolidinyl, piperidinyl, morpholinyl; R₆R₇ = OCH₂O], were prepared. Thus, 2-(3'-methoxyphenyl)-6-pyrrolidinyl-4-quinazolinone (preparation given) inhibited 1A9 human ovarian cancer cell number

with ED₅₀ = 0.09 µg/mL. Title compds. were evaluated for cytotoxicity against a panel of human tumor cell lines, such as epidermoid carcinoma of the nasopharynx (KB), lung carcinoma (A-549), ileocecal carcinoma (HCT-8), breast cancer (MCF-7), melanoma (SKMEL-2), ovarian cancer (1A9), glioblastoma (U-87-MG), bone (HOS), P-gp-expressing epidermoid carcinoma of the nasopharynx (KB-VIN), and prostate cancer (PC3) cell lines. Some of the compds. exhibit antiplatelet activity.

ASSIGNMENT HISTORY FOR US PATENT AVAILABLE IN LSUS DISPLAY FORMAT

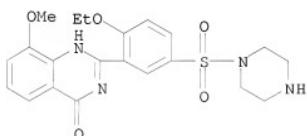

AB The invention relates to the use of a cyclic guanosine 3',5'-monophosphate phosphodiesterase type five (cGMP PDE V) inhibitor for increasing fecundity in a mammal by one or more of (a) promoting the growth of an oocyte, zygote, blastocyst, embryo and/or fetus, (b) increasing the rate or probability of survival of an embryo and/or fetus and (c) increasing the birth weight of a progeny, or for increasing milk productivity. I.v. and tablet formulations are exemplified. Formulations and packs containing the PDE V inhibitors for pharmaceutical or veterinary use are claimed.

 AB We have developed a new strategy that aims to concentrate therapeutic
 radionuclides within solid tumors. This approach, which we have named
 EMIT (enzyme-mediated insolubilization therapy), is a method for
 enzyme-dependent, site-specific, *in vivo* precipitation of a radioactive mol.

(from a water-soluble precursor) within the extracellular space of solid tumors. The prodrug, ammonium 2-(2'-phosphoryloxyphenyl)-6-ido-4-(3H)-quinazolinone, labeled with iodine-125 (125IPD) and its authentic compound labeled with iodine-127 (IPD) have been synthesized, purified, and characterized. The alkaline phosphatase (ALP)-mediated conversion of these water-soluble nonfluorescent prodrugs to the water-insol. fluorescent species, iodine-125-labeled 2-(2'-hydroxyphenyl)-6-ido-4-(3H)-quinazolinone (125ID) and its iodine-127-labeled derivative (ID), has been demonstrated *in vitro*. Biodistribution studies in mice indicate that both 125IPD and 125ID are minimally retained by most tissues and organs. In addition, following its i.v. injection in mice, 125IPD is localized in ALP-rich regions and converted to 125ID, which remains indefinitely within the tissues where it is produced. We believe that EMIT is a strategy that will lead to the active and specific concentration and entrapment of therapeutic

radionuclides within solid tumors, the consequent protracted irradiation of tumor cells within the range of the emitted particles, and the effective therapy of solid tumors.

AB We have identified a series of quinazolinone analogs with potent dual inhibitory activities against both P glycoprotein (Pgp) and MRP1. Compound I exhibits equal potentiation activity in both assays and appears to be slightly more active than VX-710 in reversal of Pgp and MRP1 mediated drug resistance.

ASSIGNMENT HISTORY FOR US PATENT AVAILABLE IN LSUS DISPLAY FORMAT

AB Methods are disclosed for preventing or treating a gastrointestinal (GI) disorder in a mammal, e.g. a human patient. In one embodiment, the methods include administering to the mammal a therapeutically effective amount of a compound that modulates a nitric oxide (NO) signaling pathway, particularly in GI neurons. Methods of the invention are particularly useful for the treatment (including prophylactic treatment) of diabetic gastropathies and other GI disorders.

GI

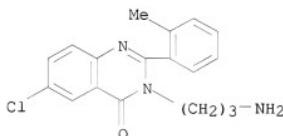

AB Quinazolinones I and their pharmaceutically tolerable salts and solvates are disclosed [in which R, R¹ = H, A, OH, OA, OCH₂Ar, Hal, NH₂, NHA, NA₂, NO₂, cyano, COR₂, CONH₂, CONHA, CONA₂, CO₂H, CO₂A, SO₂A; R², R³ = H, A, C(:NH)NH₂, solid phase; R⁴ = Ar, phenylalkyl, cycloalkyl, Het; Y = bond, C₂-4 alkylene; Z = bond, phenylene; A = (un)branched C₁-6 alkyl; Ar = (un)substituted Ph, naphthyl, biphenyl, or benzofuranyl; Het = (un)substituted, (un)saturated mono- or bicyclic NOS heterocyclyl; Hal = F, Cl, Br, or Iodo; n = 1-3; m = 0-3; with a variety of provisos]. The compds. are glycoprotein IbIX antagonists (no data), useful for treatment or prophylaxis of a variety of thrombotic disorders, or as anti-adhesive substances for implants, catheters, or heart pacemakers. For instance, an exemplary amine, 3-(aminomethyl)benzylamine, was supported on p-nitrophenyl carbonate resin, then coupled with various Fmoc-protected anthranilic acids. Cleavage of the Fmoc group, cyclocondensation with various aldehydes R₄CHO, oxidation of the resultant dihydroquinazolinone ring system, and cleavage from the resin with CF₃CO₂H, gave a variety of compds. I, e.g., the preferred compound II.

GI

AB Quinazolinones I and their pharmaceutically tolerable salts and solvates are disclosed [in which R, R¹ = H, A, OH, OA, OCH₂Ar, Hal, NH₂, NHA, NA₂, NO₂, cyano, COR₂, CONH₂, CONHA, CONA₂, CO₂H, CO₂A, SO₂A; R², R³ = H, A, C(:NH)NH₂, solid phase; R⁴ = Ar, phenylalkyl, cycloalkyl, Het; Y = bond, C₂-4 alkylene; A = (un)branched C₁-6 alkyl; Ar = (un)substituted Ph, naphthyl, biphenyl, or benzofuranyl; Het = (un)substituted, (un)saturated mono- or bicyclic NOS heterocyclyl; Hal = F, Cl, Br, or iodo; n, m = 0-3]. The compds. are glycoprotein Ib_{IX} antagonists (no data), useful for treatment or prophylaxis of a variety of thrombotic disorders, or as anti-adhesive substances for implants, catheters, or heart pacemakers. For instance, an exemplary amine, [(3-(aminomethyl)cyclohexyl)methyl]amine, was supported on p-nitrophenyl carbonate resin, then coupled with various Fmoc-protected anthranilic acids. Cleavage of the Fmoc group, cyclocondensation with various aldehydes R⁴YCHO, oxidation of the resultant dihydroquinazolinone ring system, and cleavage from the resin with CF₃CO₂H, gave a variety of compds. I, e.g., the preferred compound II.

AB The invention relates to 2- or 3-(substituted aminoalkoxyphenyl)quinazolin-4-ones I [R1, R2 = H, $(CH_2)_nNR_3R_4$; n = 2-3; NR3R4 = pyrrolidinyl, piperidinyl, homopiperidinyl, morpholinyl; provided that one but not both of R1 and R2 is H], which are partial estrogen agonists, and which are useful in treating osteoporosis, prostatic hypertrophy, breast cancer and endometrial cancer. Three examples and a variety of intermediates were prepared. For instance, 4-bromo-3-nitroanisole underwent a sequence of cyanation, SnCl2 reduction, hydrolysis, and cyclization with triphosgene, to give 7-methoxyisatoic anhydride (II). This underwent amidation with 4-(2-chloroethoxy)aniline, cyclocondensation with p-anisaldehyde, dehydrogenation with DDQ, demethylation with BBr3, and condensation with piperidine, to give title compound III, isolated as the HCl salt. In an estrogen receptor binding assay, III displaced $^{17\beta}$ -estradiol with a binding potency slightly less than tamoxifen and significantly less than raloxifene.

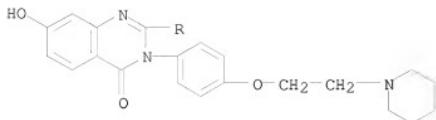

IT 242478-03-1P, 7-Hydroxy-2-(4-hydroxyphenyl)-3-[4-[2-(piperidin-1-yl)ethoxy]phenyl]-3H-quinazolin-4-one 242478-07-5P,

 AB Hydrazone derivs. of formula R1R2C=NNR3R4 (I) or R1R2C=NN=CR3R4 (II)
 [R1-R4 = H, C1-8 alkyl, C3-8 cycloalkyl, OH, acyl, C1-6 alkoxy, NO2, cyano, (un)substituted carbonyl, (un)substituted amino, (un)substituted

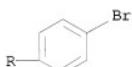

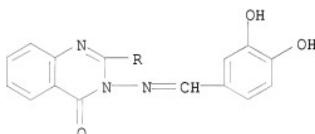

sulfonamide, (un)substituted (hetero)aryl, etc.; R1 and R2 or R3 and R4 may together form an (un)substituted hetero- or carbocycle], were prep'd for use as medicaments in therapy especially in the treatment of diseases related to glucose metabolic pathways. Specifically, claimed compds. I and II were prepared for use in the treatment or prevention of diseases of the endocrinol. system, preferably hyperglycemia, NIDDM, or diabetes, and for treatment of glycogen storage disease or hypoglycemia. Comps. of the invention are claimed to exhibit glucose-6-phosphatase inhibitory activity with IC₅₀ values of less than 100 μ M (no data). Thus, 4-chlorobenzaldehyde was added to N,N-dibenzylhydrazine in DMF followed by addition of tri-Et orthoformate to form N,N-dibenzyl-N'-(4-chlorobenzylidene)hydrazine, i.e., I (where R1 = H, R2 = C6H4-p-Cl, and R3 = R4 = CH₂Ph), in 94% yield.

AB (\pm) -3-[¹¹C]Methyl-2-[4-[3-(tert-butylamino)-2-hydroxypropoxyl]phenyl]-6-methoxy-4(3H)-quinazolinone ([±]-[¹¹C]HX-CH 44) was labeled with carbon-11 using [¹¹C]iodomethane with the

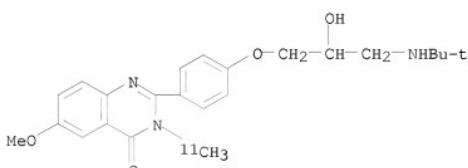

corresponding N-demethylated precursor. Then, 30-90 mCi (1.10-3.33 GBq) of pure [¹¹C]HX-CH 44 were obtained 30 min after end of bombardment with specific radioactivities of 500-1,400 mCi/ μ mol (18.5-51.8 GBq/ μ mol). Myocardial uptake in dogs was 0.340 \pm 0.043 pmol/mL tissue per nmol injected, 10-15 min postinjection. Heart-to-lung ratio was 3 from the 5th to the 30th minute. Only 35% of the myocardial radioactivity could be displaced. Tissue uptake could not be blocked with appropriate compds. Therefore, (\pm)-[¹¹C]HX-CH 44 does not appear to be a suitable ligand for the study of myocardial β 1-adrenoceptors in positron emission tomog.

PUBLISHER: American Chemical Society

DOCUMENT TYPE: Journal

LANGUAGE: English

AB Clin. studies concerning the role of poly(ADP-ribose) polymerase (PARP) in the repair of drug- and radiation-induced DNA damage have been impeded by the poor solubility, lack of potency, and limited specificity of currently available inhibitors. A series of 2-alkyl- and 2-aryl-substituted

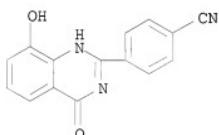

8-hydroxy-, 8-methoxy-, and 8-methylquinazolin-4(3H)-ones has been synthesized and evaluated for PARP inhibitory activity in permeabilized L1210 murine leukemia cells. 8-Methoxy- and 8-methylquinazolinones (14-34) were readily prepared by acylation of 3-substituted anthranilamides with the appropriate acid chloride, followed by base-catalyzed cyclization. The requisite 8-hydroxyquinazolinones (6, 35-39) were synthesized by demethylation of the corresponding 8-methoxyquinazolinones with BBr₃. N-Methylation of 8-methoxy-2-methylquinazolinone (15) with MeI, followed by O-demethylation by BBr₃, afforded the control N3-methylquinazolinones 42 and 43, resp. In general, an 8-hydroxy or 8-Me substituent enhanced inhibitory activity in comparison with an 8-methoxy group. 2-Phenylquinazolinones were marginally less potent than the corresponding 2-methylquinazolinones, but the introduction of an electron-withdrawing or electron-donating 4'-substituent on the 2-aryl ring invariably increased potency. This was particularly evident in the 8-methylquinazolinone series (IC₅₀ values 0.13-0.27 μM), which are among the most potent PARP inhibitors reported to date. N3-Methylquinazolinones 42 and 43 were essentially devoid of activity (IC₅₀ values > 100 μM). In studies with L1210 cells in vitro, a concentration of 200 μM 8-hydroxy-2-methylquinazolinone (6, NU1025) (IC₅₀ value 0.40 μM) potentiated the cytotoxicity of the monomethylating agent 5-(3-methyltriazen-1-yl)imidazole-4-carboxamide and γ-radiation 3.5- and 1.4-fold, resp., at the 10% survival level.

 AB Treatment of anthranilic acid with an aryl acid chloride in the presence of pyridine yielded 2-aryl-4-oxo-3,1-benzoxazine which on treatment with p-aminoacetophenone in the presence of anhydrous pyridine afforded 2-aryl-3-(p-acetylphenyl)-3,4-dihydro-4-oxo-quinazolines (I) in excellent yields. Reaction of I with thiosemicarbazide in the presence of ethanol resulted in 2-aryl-4-oxo-3,4-dihydro-quinazolyl-3-[p-(acetophenone thiosemicarbazones)] (II) in the yields ranging from 60-65%. Reaction of II with acetophenone and iodine in glacial acetic acid yielded 2-aryl-4-oxo-3,4-dihydroquinazolyl-3-[p-(5'-phenyl-3'-thiazolyl)acetophenoneazines] in moderate yields; these compds. showed psychotropic activity without any toxicity (ALD50 values were > 1000 mg kg⁻¹). Most of the compds. were also found to possess writhing effect while only one compound exhibited hyperthermic activity. Four of such compds. showed promising CNS stimulant activity and two compds. were found to exert CNS depressant activity.

AB The novel compound NO-1886, 4-[(diethoxyphosphoryl)methyl]-N-(4-bromo-2-cyanophenyl)benzamide (I), a hypolipidemic agent which appears to increase lipoprotein lipase activity in rats. Various analogs of NO-1886 were

synthesized to study the structure-activity relation of this hypolipidemic drug. A novel series of quinazolines and 4(3H)-quinazolinones were prepared by cyclization of NO-1886 derivs. Derivs. bearing a 4-[(diethoxyphosphoryl)methyl]phenyl group at the 2-position were found to lower triglyceride and total cholesterol levels. In accord with the decrease in log P^{*}, quinazolines and 4(3H)-quinazolinones showed good absorption and hypolipidemic activity. When the quinazolinone ring system is substituted at positions 6 and 7 with methoxy groups, increased hypolipidemic activity was observed. The highest hypolipidemic activity was observed when the 3-position was substituted by a Me or benzyl group.

AB The invention relates to bis mono- and/or bicyclic aryl and/or heteroaryl compds. Ar₁XAr₂ [I; Ar₁, Ar₂ = (un)substituted mono- or bicyclic rings with 0-3 substituents; X = (CH₂)₀₋₄ or (CH₂)_mZ(CH₂)_n; Z = O, NR₂, S, SO, SO₂; m, n = 0-3; R₁, R₂ = H, alkyl] exhibiting protein tyrosine kinase inhibition activity. I inhibit abnormal cell proliferation in proliferative disorders by selectively inhibiting EGF and/or PDGF receptor. Approx. 300 compds. I are listed with characterizing data, and biol. data for selected compds. are given. For example, m-C1C6H₄OH was treated with NaH in THF, followed by 4-chloro-6,7-dimethoxyquinazoline, to give title compound II. The claimed quinoxaline derivative III inhibited

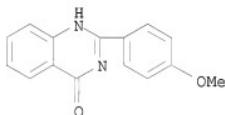

PDGF-R cell-free autophosphorylation with an IC₅₀ of 0.02-0.05 μM.

AB Title compds. [I; R = R₁ = H and R₂ = (ar)alkoxy, alkenyloxy, OPh, etc.; R₁R = N:CR₃ and R₂ = OH, alkyl, alkoxy, aryl, etc., and R₃ = H, alkyl, (un)substituted aryl(alkyl); R = H and R₂R₁ = OCR₅:N and R₅ = H, alkyl, (un)substituted aryl(alkyl)] were prepared. Thus, 4,3-(HO)(H₂N)C₆H₃CO₂Me (preparation given) was amidated by 4-(MeO)C₆H₄COCl and the product cyclized to give, after NH₃ treatment, title compound II which had IC₅₀ of 1.1μM against poly(ADP-ribose) polymerase *in vitro*.

AB The preparation of title compds. I (A = O, S; R1, R2, R9, R10 = each independently H, lower alkoxy, nitro, lower alkyl, halogenated lower alkyl, halo; R3 = Ph, -B-R6 [B = O, S; R6 = H, lower alkyl, cycloalkyl, Ph, phenylated lower alkyl wherein Ph may be halogenated, phenoxylated lower alkyl, lower-alkoxy carbonyl-substituted lower alkyl, carboxylated lower alkyl or lower alkenyl, -NR7R8, R7, R8 = each independently H, lower alkyl, amino or cycloalkyl, R7R8 = combined together to form lower alkylene]; R4, R5 = each independently H, lower alkyl), useful as remedies for hyperlipidemia, hypertension, diabetes, and so forth, is described. Thus, reaction of o-aminobenzonitrile with 4-(Et₂PO)CH₂C₆H₄COCl gave di-Et 4-[N-(2-cyanophenyl)carbamoyl]benzylphosphonate which on cyclization in the presence of MeOH gave p-substituted title compound I (R1, R2, R9, R10 = H, R3 = OMe, A = O, R4, R5 = Et). I lowered the triglycerides by 37-86% at 100 mg/kg P.O. in rats with Triton-induced hyperlipidemia. Tablet, capsule, and granular formulation was also given.

AB Pyrimidinones I [X = alkylene, hydroxyalkylene; R, R4 = H, alkyl; R1R2 = atoms required to complete a benzene or pyridine ring; R3 = H, alkoxy; R5 = (un)substituted alkyl] were prepared. Thus 2,3-H2N(MeO)C6H3CO2H was treated with 4-AcOC6H4COCl and the resulting benzoxazinone was treated with MeNH2 to give II (R6 = H). Reaction of II (R6 = H) with epibromohydrin and aminolysis gave II [R6 = CH2CH(OH)CH2NHCOMe3] which at 0.5 mg/kg i.v. in dogs gave a 20 mm decrease in arterial blood pressure, a 21/min decrease in heart rate, and 33% decrease in dp/dt maximum.

AB Anticonvulsant activities of substituted quinazolones I ($R = H$ or halogen; $R1 = H$, Br, or Cl; $R2 = H$, Cl, or NO₂) (100 mg/kg, i.p.) were tested against pentylenetetrazole-induced convulsions in albino mice. All I tested provided some protection against pentylenetetrazole convulsion; the range of protection was from 20 to 80%. Maximum protection was observed with I; $R = R1 = Br$, $R2 = H$ [73492-16-7]. Structure-activity relations is discussed.

GI

AB Triazenoquinazolines, with variations in the quinazoline nucleus or triazine side-chain, generally had no antitumor activity; e.g., I [71825-17-7] was inactive against L1210 lymphoid leukemia in mice. The aminoquinazoline series, however, were the most toxic agents against human epidermoid carcinoma of the nasopharynx in cell culture, with ED₅₀ values of 1.2-2.3 µg/mL; e.g., I had an ED₅₀ of 1.5 µg/mL. Substitution in the quinazoline nucleus by Br atoms or replacement of the aminoquinazoline by a 2,4-diamino-s-triazin-6-yl fragment decreased the chemotherapeutic effect. 1-(4-Chlorophenylazo)piperidine (II) [62499-15-4], when oxidized with KMnO₄ in aqueous acetone at pH 6-9, yielded 8 oxidation products, similar to

those produced by oxidation of II via the Udenfriend process or by incubation with rat liver homogenates or fortified microsomes, the major product being 1-(4-chlorophenylazo)piperin-2-one [62499-17-6] (5% yield).

Oxidation of 1-(4-chlorophenylazo)pyrrolidine [62499-16-5] with KMnO₄ in

aqueous

acetone or incubation with liver homogenates or microsomes yielded 3

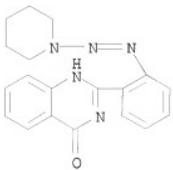

products, e.g. 1-(4-chlorophenylazo)pyrrolidin-2-one [65568-22-1] (5% yield). KMnO₄ oxidation of III [54762-78-6] yielded a bis(chlorophenyl)triazene, 4-chloroaniline [106-47-8], and a morpholin-3-ol compound (25%); the latter was formed from III upon incubation with liver homogenates or microsomes, but was not formed *in vivo*.

AB The title compds. I (R = H or Me; R1 = H, Me, alkoxy; R2 = H, Me, Et, Pr, alkoxy, allyloxy) were prepared from Na 5-methyl-2-nitrobenzoate

[71746-29-7] and tested for antiallergic activity by the passive cutaneous anaphylactic reaction in rats. Many of the compds. given parenterally were as active as di-Na cromoglycate. Some compds. were also active orally. 2-(2-Ethoxy-3-methoxyphenyl)-3,4-dihydro-4-oxo-6-quinazolinecarboxylic acid [68274-48-6] had the highest activity.

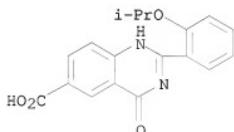

Structure-activity relations are discussed.

AB The title compound (I) [52171-80-9] was prepared and tested against Plasmodium berghei in mice and P. gallinaceum in chicks. I cured P. berghei in mice at 480 mg/kg, but caused severe photosensitivity.

 GI For diagram(s), see printed CA Issue.
 AB The chemistry and pharmacol. of 26 4-oxoquinazolines and related compds.
 were studied. I (R = p-ClCH₂H₄, R₁ = R₂ = H) showed a small anticonvulsant
 activity. I (R = CH₂CHPh or 2-furyl; R₁ = R₂ = H; or R = Ph, R₁ = R₂ =
 Cl) and II had significant antidiuretic activity, while I (R = CH₂Ph or
 CH₂CH₂Ph; R₁ = R₂ = H; or R = Ph, R₁ = Cl, R₂ = H) had significant
 diuretic activity. No correlation was found between the antidiuretic and
 analgesic activities of the 4 antidiuretics. I (R = Ph, R₁ = R₂ = H)
 possessed sedative and spasmolytic activities.
